THE PURPOSE OF THE NUAH WHITE PAPER

01

The Purpose of the NUAH White Paper

In this paper, we present a high-level overview of NUAH – A groundbreaking Web 3.0 project that aims to combine AI, blockchain, decentralized internet, and other Web 3.0 features to tackle the global problems of poverty and substantially increase the quality of life on the planet. The purpose of this paper is to showcase the summary of NUAH's roadmap that will lead to a reimagined online landscape that eliminates the limitations of Web 2.0 and solves several global problems with the power of the game-changing decentralized internet.

With the unprecedented use of AI and blockchain technology, we aim to create a revised version of the online world that challenges the norms of global finance, user freedom and ownership, and universal basic income. This paper is not intended to be a deep technical analysis, but a general, idea-centered presentation for philanthropic investors/donors, Web 3.0 enthusiasts, and other potential stakeholders.

INTRODUCTION TO THE NUAH WHITE PAPER

02

Introduction to the NUAH White Paper

NUAH envisions a world where every individual has the ability to thrive and reach their fullest potential. We believe that no one should be held back by poverty or financial constraints. That's why we are committed to creating the largest humanitarian effort in history, aimed at eliminating poverty for 90% of the world's population that suffers from it.

NUAH Universal Basic Income programs offer a way for people all over the world to gain financial stability and enjoy a higher quality of life. By providing monthly income to all individuals, we aim to empower them with increased buying power and the freedom to pursue their dreams.

But our mission goes beyond just providing financial support. By removing the acute problem of poverty, we are unlocking a new level of human potential. As individuals are freed from the struggle to meet their basic physiological and safety needs, they will be able to reach new heights in creativity, problem solving, and moral development.

NUAH's goal is to transcend the lower levels of Maslow's hierarchy of needs and enter into the realms of belonging, esteem, love, and self-actualization. At NUAH, we believe that a world without poverty is not only possible but essential for the **progress** and **advancement of humanity**.

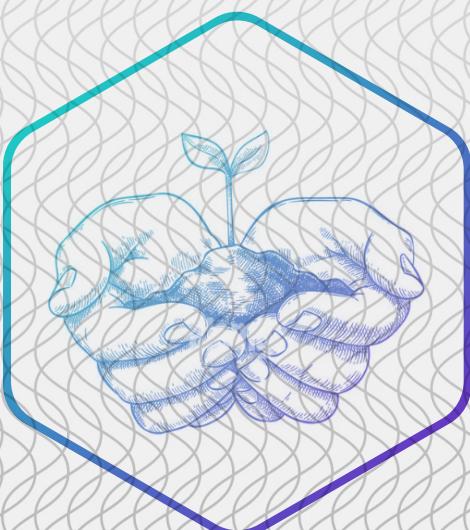

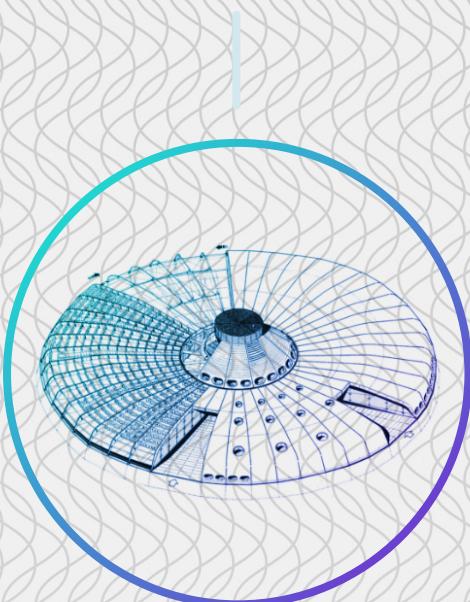

REIMAGINING THE GLOBAL FINANCIAL SYSTEM

03

Reimagining the global financial System

NUAH is taking on the ambitious task of creating a financial system that is truly built for the people, by the people. We recognize that **the current fiat system** has significant **flaws and limitations** that prevent it from truly serving the needs of **individuals and communities around the world**. That's why NUAH builds a new financial infrastructure from the ground up, using cutting-edge technology like the NUAH AI (NUAH A.G.A.), NUAH Blockchain and the NUAH Decentralized Internet.

NUAH's goal is to create a **financial system** that is truly **human-centric**, one that puts the needs of individuals and communities at the forefront. We believe that the power of technology can be harnessed to create a system that is more transparent, secure, and accessible than anything that has come before it.

At NUAH, we are driven by a deep sense of **philanthropy** and a commitment to **social good**. We believe that financial empowerment is a key driver of human progress and prosperity, and we are dedicated to building a system that unlocks the full potential of individuals and communities around the world.

But we can't do it alone. We need the support of like-minded individuals and organizations who share our vision and values. Together, we can build a better financial system that serves the needs of all people, not just a privileged few.

03

Reimagining the global financial system

We tackle the challenges of the global financial system through the application of human-centric AI and blockchain methodology. Here's how we will do it:

The current state of the world's financial system is riddled with problems that prevent it from truly serving the needs of all individuals and communities. The **glaring wealth inequality** is perhaps the most **pressing issue**, with just 1% of the global population owning a staggering 99% of the world's wealth. Meanwhile, the remaining 99% of individuals struggle to survive on just 1% of the wealth, perpetuating a vicious cycle of poverty and deprivation.

On top of this, the difficulty of moving and handling fiat money is creating significant roadblocks to **economic growth**. The convoluted and bureaucratic processes involved in fiat transactions are **slowing down the economy**, resulting in an **artificial decline in economic activities**.

03

Reimagining the global financial System

At NUAH, we believe that it's time to create a more equitable and **just financial system that works for everyone**, not just the privileged few. Our solution is simple yet powerful: we propose creating a level playing field by implementing **Universal Basic Income for all individuals on the planet**. This will provide everyone with a guaranteed income and help elevate their quality of life to a much higher standard.

We also believe that the key to unlocking economic growth lies in effortless, costless, and permissionless transactions. By creating a financial system that is **easy to use** and navigate, we can fuel a **healthy economy** where money flows freely, like a fast-moving mountain river with pure water. This can be achieved through decentralized platforms that allow for trustworthy and un-corruptible systems, free from the centralized control that plagues the current fiat world.

At NUAH, we are committed to building a financial system that truly serves the needs of all individuals and communities around the world.

03

Reimagining the global financial System

TO SUMMARIZE

Problems

- 1% of the world's population owns 99% of the wealth. And 99% of the population owns 1% of the wealth.
- Difficulties of moving & handling fiat money are directly leading towards a much lesser slowing economy due to all the financial red tape in the fiat world. Resulting in an artificial slowdown of economic activities.
- Centralized nature of the fiat world.

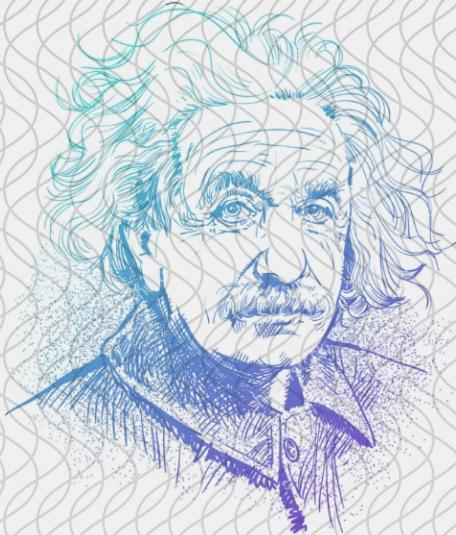

Solutions

- Creating a more even playing field, where every person on the planet receives guaranteed Universal Basic Income. Allowing people to have a much higher quality of life.
- Easy, effortless, costless, and permissionless transactions will lead to substantially more economical transactions that will fuel a very healthy economy. The health of an economy is determined by how fast money is rotating. Like a blurred swamp, where water is not moving, versus a fast-moving mountain river, with pure water, created by the speed of rotations.
- Decentralized platforms allow trustworthy and uncorruptible systems.

03

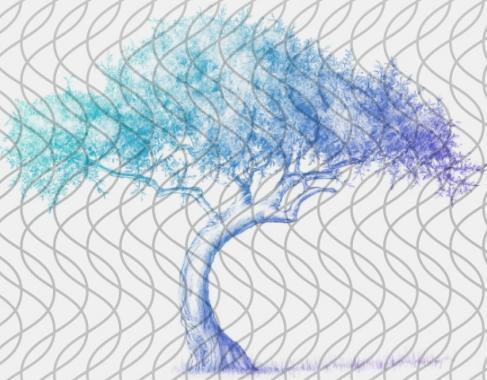

Reimagining the global financial System

'No problem can be solved from the same level of consciousness that created it.'

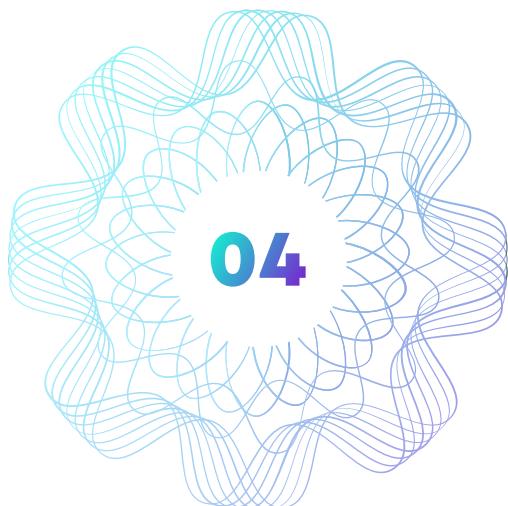

- Albert Einstein -

NUAH is a moonshot project that aspires to be a fundamental solution for major world problems, instead of a band-aid fix. Why put time, energy, and funding only into local small charity programs, when one **universal program** can solve **all issues** in one single effort?

NUAH nurtures the **roots of the tree** permanently, so 'all leaves will become green', instead of some 'small branches only with a temporary solution'.

Before we go on,

**WHAT EXACTLY IS A
MOONSHOT PROJECT?**

04

What exactly is a Moonshot project?

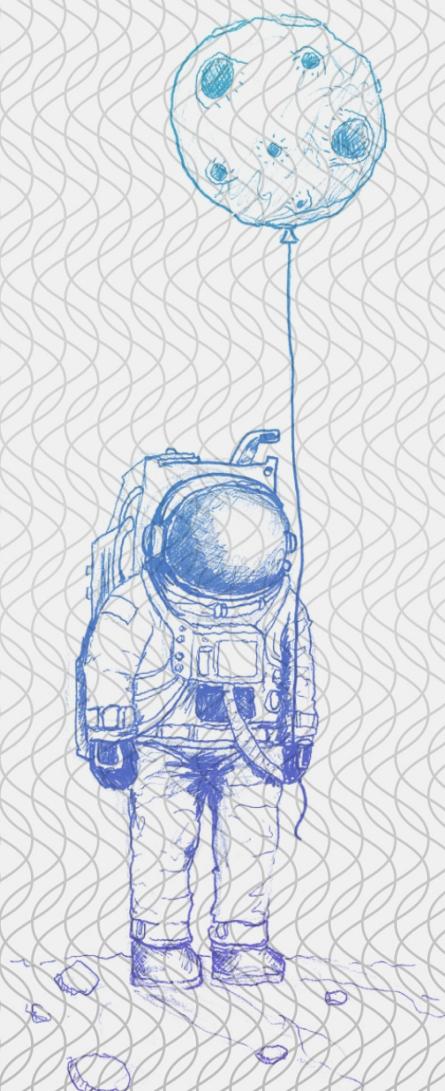

In technology, a moonshot is an ambitious, exploratory, and groundbreaking project undertaken without the assurance of success. Moonshot projects have significant potential to benefit humanity since they rely on ambitious moonshot thinking, experimentation, and the "fail fast" philosophy. Tech organizations of different sizes and from different industry sectors have adopted the moonshot approach to tackle huge problems affecting humanity.

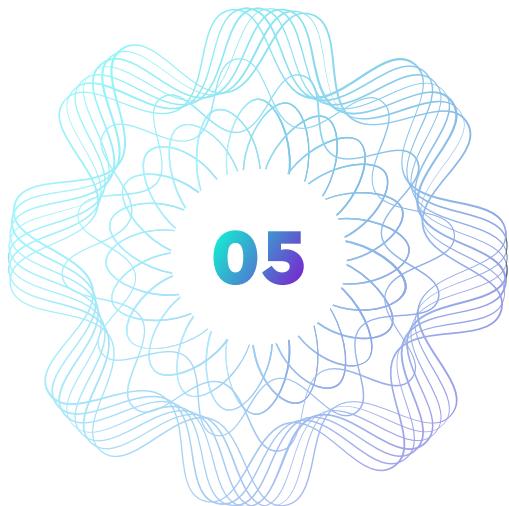

The term moonshot is derived from the Apollo 11 spaceflight project, which landed the first human on the moon in 1969. The term originally meant "long shot," in which the likelihood of great results is low, but people still make an effort to hope for such an outcome anyway. It may also reference the earlier phrase "shoot for the moon," which means to aim for a lofty target.

Today, moonshot refers to a new project that could have outstanding results after one intense, consistent effort. If the goal is realized, the benefits could be huge for humanity as a whole.

Advantages of moonshot thinking:

Moonshot thinking refers to an approach of choosing a huge, seemingly insurmountable problem and proposing a radical solution to that problem using disruptive technology. The idea is not to look for small, incremental improvements, but to aim for a huge improvement or, even better, solve the problem completely. It empowers people to look for unconventional solutions with a high probability of success.

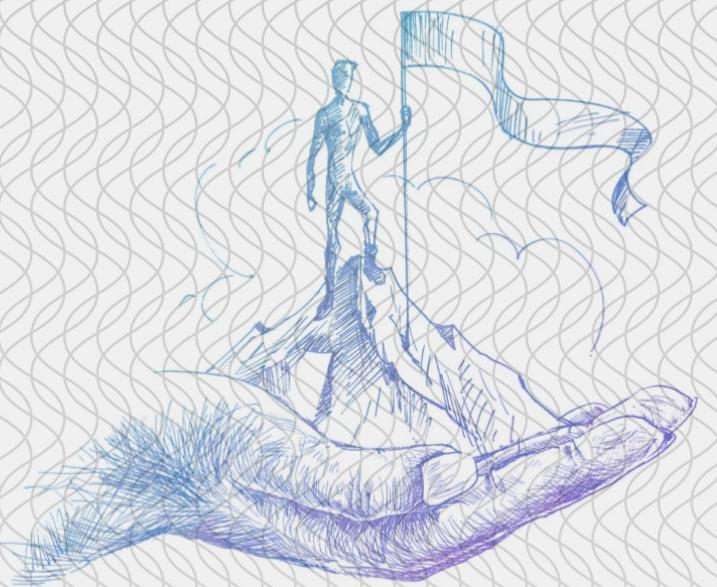

THE PRACTICAL APPLICATIONS OF THE MOONSHOT APPROACH

05

The practical applications of the moonshot approach

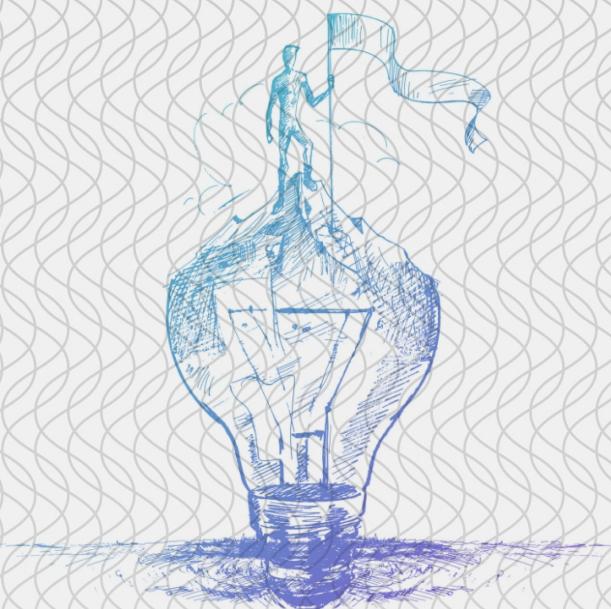

Teams can use fast-paced experimentation to continuously learn and improve. The organization looks past established ways of doing things and assumes that everything is possible. It removes the fear of failure and helps teams focus on success. Technology companies are investing more in moonshots that address some of the world's greatest problems. A more tangible definition of a moonshot projects is as follows:

- Addresses a huge problem that affects millions or billions of people;
- Proposes a radical solution that may seem impossible today and uses innovative technology that may help create the solution in just five to 10 years.
- The aim is to make a 10x impact on some of the world's biggest problems, rather than achieving a 10% improvement. In many ways, aiming for 10x instead of 10% has become synonymous with the idea of moonshot thinking.

05

The practical applications of the moonshot approach

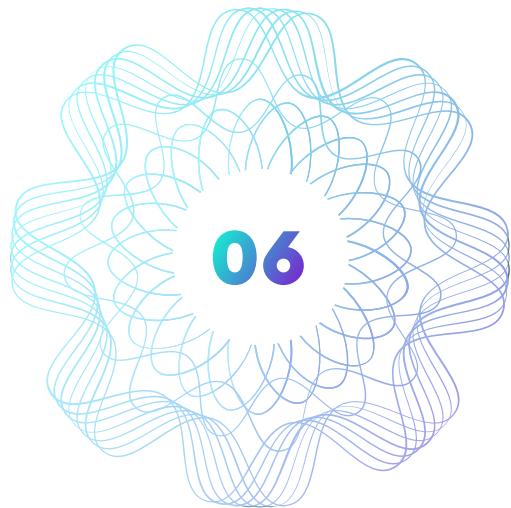

What is a moonshot thinking methodology and why is it important?

In addition to the focus on 10x, moonshot thinking incorporates the following principles:

- Develop problem-solving expertise by gaining a deep understanding of its nuances and complexities.
- Groundwork in the real world by testing your ideas as often as possible.
- Assemble a diverse team to generate innovative connections and spark game changing ideas.
- Tackle the toughest challenges first, as they often hold the greatest opportunities for growth and progress.
- Embrace failure as an opportunity to learn and iterate quickly.
- Become a master of navigating chaos and uncertainty to unlock new possibilities.
- Build prototypes early and often to test and experiment with new ideas.
- Shift perspective to uncover fresh insights and apply them in novel ways.
- Keep sights set on long-term goals, even as you navigate the short-term challenges that arise along the way.

With all that, we can firmly state that NUAH is a moonshot project through and through. From the moonshot approach to achieving progress to the moonshot way of approaching challenges and constraints, NUAH is built to be colossal and global, striving to help humanity at a scale that is truly unprecedented.

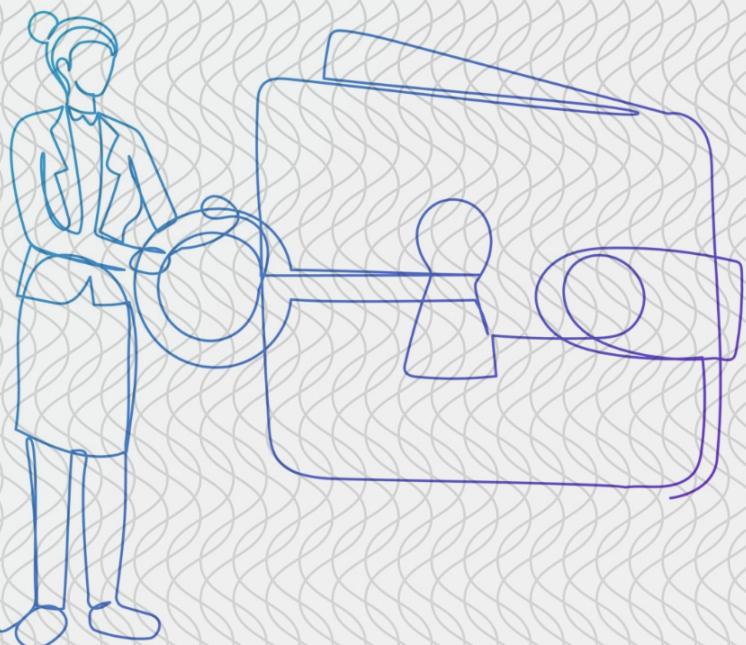

WHAT IS A CLOSED-END SYSTEM AND HOW IT BENEFITS US ALL?

06

What is a closed-end system and how it benefits us all?

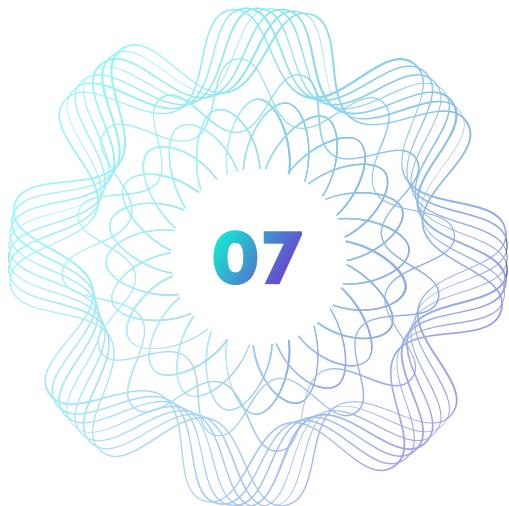

One of the key features of our NUAH system is that it operates in a closed-end system. This means that all of its users can use the currencies amongst each other, without the need to exchange them with other cryptocurrencies or fiat.

The closed-end system offers a number of advantages over traditional financial systems. For one, it allows its users to maintain full control over their own currencies and ensure that they are being used in a way that benefits the users. Additionally, it enables the creation of stablecoins, like the USDn, which are pegged to the value of the US dollar at a 1-to-1 ratio. This ensures that users can make transactions with confidence, knowing that the value of their currency is stable and reliable.

It's important to note that this closed-end system is similar to the way that world currencies operate. Currencies like the Chinese Yuan, Indian Rupee, and Cuban Peso are not designed to be easily exchangeable with other currencies or traded on world financial markets. Instead, they operate within their own **sovereign territories** and are used by billions of users in a closed-end system. This approach has proven to be effective in many contexts, and we believe that it has tremendous potential in the world of crypto and finance.

At NUAH, we are committed to creating a financial system that is both innovative and practical. This closed-end system is just one of the ways that we are working to build a brighter, more equitable financial future for everyone.

THE GLOBAL IMPLICATIONS OF NUAH'S SUCCESS

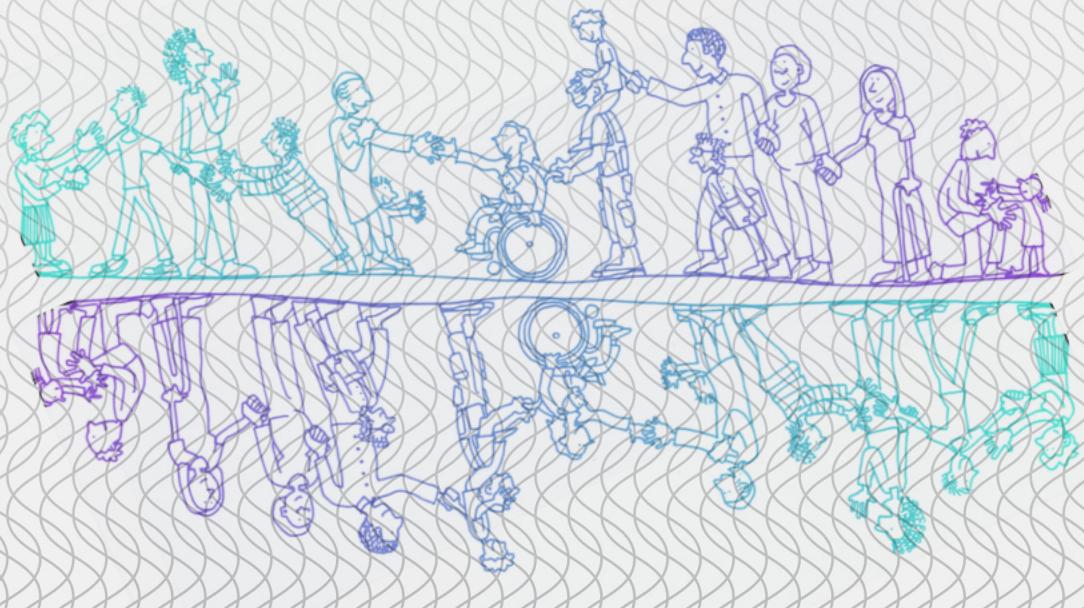

07

The global implications of NUAH's success

While we mentioned NUAH's possible impact on the globe tangentially in the previous chapters, it's time to dive deep into the implications of this groundbreaking project. Here's exactly how NUAH will tackle and overcome the global challenges of poverty, inequality, and freedom:

THE BIRTH OF UNIVERSAL BASIC INCOME

NUAH's Universal Basic Income initiative is a bold and innovative approach to tackling some of the biggest economic and social challenges facing our world today. By providing every person on the planet with a basic income, we strive to significantly improve living standards and enhance the quality of life for people all around the globe.

At NUAH, we recognize that economic inequality is one of the major barriers to progress and prosperity. By ensuring that every individual has access to a basic income, we are empowering people to make choices and decisions that will improve their lives and the lives of those around them. This will help to create a more equal and just society, where everyone has the opportunity to thrive.

07

The global implications of NUAH's success

Our goal is to generate a **great economic uprise** by increasing the **purchasing power of every individual on the planet**. This will not only benefit the individuals themselves but also **stimulate local and global economies**, creating a **virtuous circle of economic growth and development**. By providing people with the financial security they need to pursue their dreams and ambitions, we can unlock the full potential of our global community and usher in a new era of **prosperity** and **progress**.

The revolution of Artificial Intelligence is often compared to an "unstoppable genie that cannot be put back in the bottle". Within the next 3–5 years, this technology is expected to impact over 90% of all jobs on the planet, rendering them redundant or fundamentally transformed through the use of AI software and robotics. To address this massive shift in the economy, a universal basic income system based on new currencies will be necessary. This is precisely what NUAH is working to create.

We understand that implementing a Universal Basic Income is a complex undertaking, and there are many challenges to be addressed. However, we are committed to working with governments, institutions, and communities around the world to make this vision a reality. Together, we can build a brighter, more equitable future for all.

07

The global implications of NUAH's success

**10.8 TRILLION USDn TO EMPOWER A
FULLY-FLEDGED SCIENTIFIC REVOLUTION
WORLDWIDE.**

Imagine a world where all of our biggest problems are solved through groundbreaking scientific research and technological innovation. That's the world that NUAH envisions. Creating a global 10.8 trillion USDn newly minted funding/currency mechanism is the key to making this vision a reality. With this unprecedented level of funding, we can take a giant leap forward in advancing our civilization and solving some of the most pressing challenges facing humanity. We will be able to support AI and research teams from all over the world, encouraging them to share their findings and collaborate on developing open-source technologies that can benefit everyone. The new money will no longer be issued via the monopoly of banks, but instead by funding cutting-edge AI and scientific research that will uplift the full of humanity. This unique way of issuing new money is destined to change the world for the better.

07

The global implications of NUAH's success

The possibilities of this universal funding program are endless. We can use it to discover and create free perpetual energy, develop new Cleantech technologies to combat the warming of our planet, find cures for all diseases, extend human lifespans, create new materials, provide free education for all, explore the mysteries of the universe, and so much more. Our mission at NUAH is to bring this vision to life, and we believe that with the right resources and support, anything is possible. By investing in AI, research and development on a global scale, we can push the boundaries of what's possible and create a better, **brighter future for all of us.**

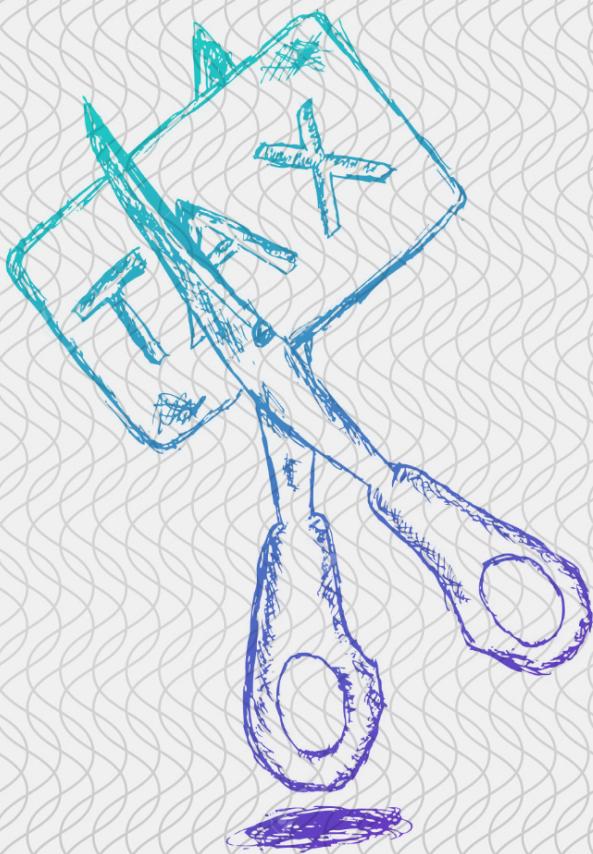

We recognize that creating such a massive funding mechanism is a complex task, and it will require collaboration between governments, private institutions, and individuals. However, we are committed to making this dream a reality, and we are ready to work with anyone who shares our vision. Together, we can unlock the full potential of human ingenuity and make the world a better place for generations to come by creating and funding a renaissance of Web 3.0.

07

The global implications of NUAH's success

THE END OF LOCAL TAX SYSTEMS

At NUAH, we believe that governments should have the power to fund their finances and programs without resorting to taxing their citizens. That's why NUAH creates a revolutionary platform that allows governments to directly mine their own platform coins and take control of their own financial destiny.

This is a paradigm-shifting idea that challenges the status quo of how we've been living for years. It's time to break free from the burden of taxes and start using cutting-edge technology to fund government programs and initiatives.

The best part is that the technology NUAH is built on is already available, and it's all open-source. We've done the hard work so that governments around the world can start using this technology and enjoy the benefits of direct mining of these platform coins.

This is an open invitation to all governments around the world to join NUAH's government funding program and take control of their own financial future. By embracing this technology, governments can reduce their reliance on taxes and enjoy the benefits of direct funding. A white-label solution is available for each sovereign entity.

At NUAH, we're committed to creating a better future for all. We believe that this technology has the potential to transform the way we fund government programs and initiatives, and we invite all governments to be a part of this exciting new era. So let's make this a reality and start using this technology today.

07

The global implications of NUAH's success

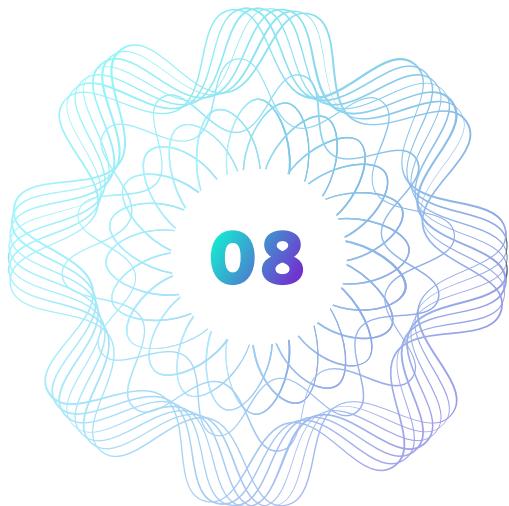

'It always seems impossible until it's done.'

- Nelson Mandela -

While NUAH's goals and ambitions are global and promise a better world for everyone involved, we must make certain sacrifices to make a project of such magnitude function correctly.

So, let's see what is on the flip side of the coin...

THE TRADE-OFF OF CREATING A GLOBAL FINANCIAL UTOPIA

08

The trade-off of creating a global financial utopia

On one downside, one sacrifice is that we all need to live in this financial utopia for the world.- "The blockchain structure to burn inflation/deflation". All of the above is possible, if we are willing to embrace one sacrifice altogether of this newly created money. That sacrifice is to accept platform-wide burning, in case inflation/deflation would happen in the NUAH closed-end system, due to the mining of new coins, a platform-wide burning mechanism will regulate the inflation/deflation back to almost zero. Now, let us showcase how this methodology works in action:

1

Deflation: X% of all money held will be burned & destroyed automatically.

Removing money out of the closed-end economy for those users that choose to hold on to their coins instead of spending them. Motivating users to spend their money swiftly instead of holding on to it. This way, all of us will be motivated to spend our money and help the economic circulation instead of holding on to that X% and losing it. This methodology will create a powerful economic stimulus for the users. This methodology will be within a closed-end system.

OR

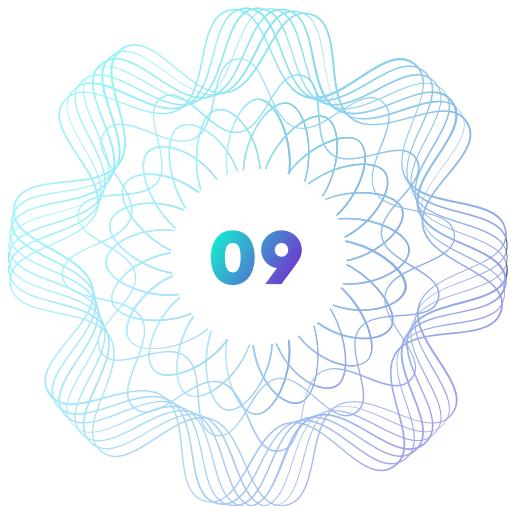

2

Inflation: Burning X% percent of the transaction, when wiring money to another wallet. This method will slow down the demand that caused inflation to happen in the first instance. This methodology will be within a closed-end system.

Both mechanisms can be used platform-wide on the blockchain to regulate possible inflation or deflation via the algorithmic method.

TO SUMMARIZE

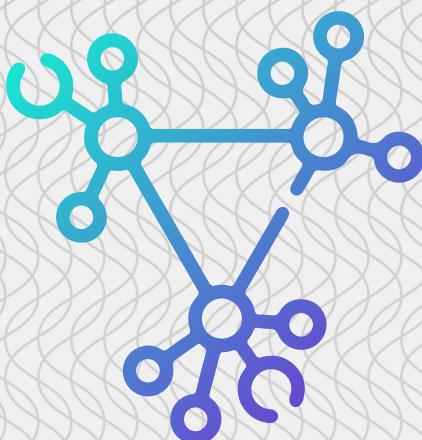

NUAH is a choice, a strong alternative, but not a replacement or destruction of the existing systems. It is an option to change the "state of play" towards a better alternative.

THE STRUCTURE, GOVERNANCE, AND PRINCIPLES OF NUAH COMMUNITY

09

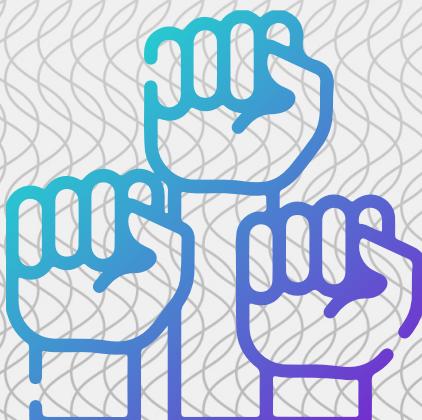

The structure, governance, and principles of the NUAH community

THE GOVERNANCE OF NUAH

NUAH is building itself to be fully decentralized, step by step. So that one day in the near future its total platform will be fully decentralized in its nature.

The NUAH community was formed as a non-profit association in Geneva, Switzerland to help coordinate the creation of the software and make the platform thoroughly decentralized.

A DEMOCRATIC STRUCTURE AND CHOICE

NUAH is a democratic system, each person that starts using the free open-source technology is "voting" for a new and better world for us all. The more people that use the technology the more votes and the more possibilities the platform will offer for all its participants. Using means, mining the coins, and accepting the coins in return for goods and services in the existing physical world.

09

The structure, governance, and principles of the NUAH community

NUAH SOVEREIGNTY PRINCIPLE

NUAH operates under its own declared sovereignty from any existing governance system. These sovereignty and independence principles are key to NUAH's structure and function. When people are interacting with the NUAH Blockchain and/or the NUAH Decentralized Internet via the NUAH OS, they are literally electronically visiting a separate sovereignty, the NUAH sovereignty. Similar to flying to another country away from their home country to conduct their interactions with other users under a foreign sovereign legislative system. NUAH meets all of the 4 requirements of the Montevideo convention to declare itself an independent state/sovereignty.

09

The structure, governance, and principles of the NUAH community

Due to its system being only accessible to registered e-inhabitants, a defined e-territory, its own government, and the capacity to enter into relations with other states.

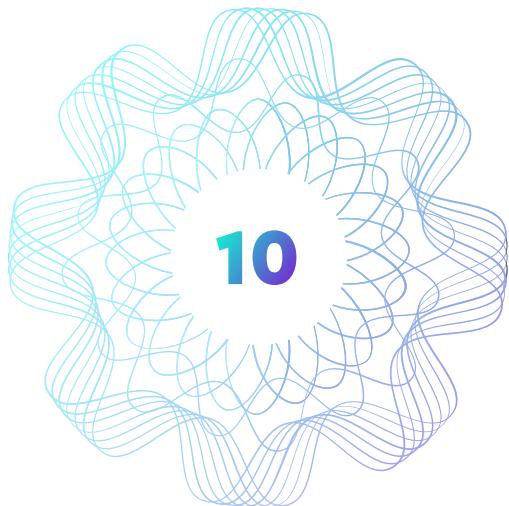

This excerpt from the Montevideo Convention, states the requirements for a sovereign entity:

The Montevideo Convention on the Rights and Duties of States is an international treaty that was signed in 1933 in Montevideo, Uruguay. The convention sets out the criteria that must be met for a political entity to be considered a state under international law. These criteria are often referred to as the "Montevideo Criteria" and include the following:

- A permanent population: The political entity must have a permanent population that resides within a defined territory.
- A defined territory: The political entity must have clearly defined borders that distinguish it from other territories.
- A government: The political entity must have an effective government that is capable of controlling and administering its territory and population.
- The capacity to enter into relations with other states: The political entity must be able to enter into diplomatic relations with other states and engage in international affairs.

The Montevideo Convention does not establish a specific process or procedure for creating a new state, nor does it require that a new state be recognized by other states in order to be considered a state under international law. However, it is widely regarded as an authoritative statement of the criteria for statehood, and it has been used as a basis for recognizing new states in the past.

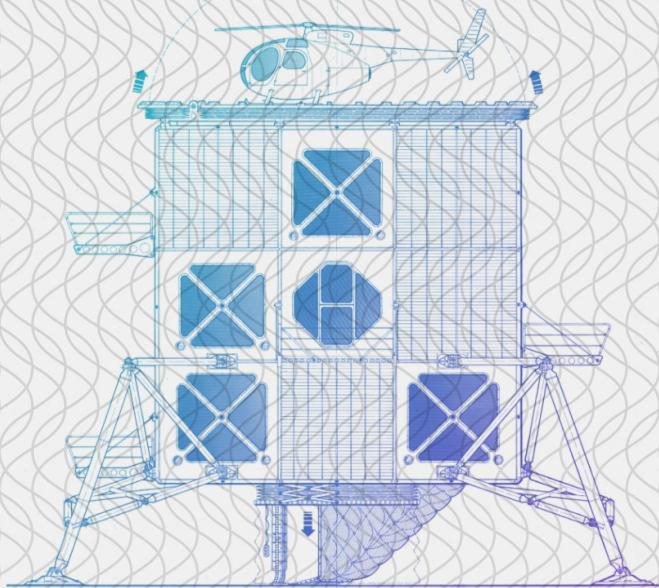

HOW NUAH MAKES WEB 3.0 EASY TO USE AND CREATES UBI FOR EVERYONE

10

How NUAH makes Web 3.0 easy to use and creates UBI for everyone

WEB 3.0 SIMPLIFIED

Crypto and blockchain are complicated technologies. While they've been available for over a decade, only a fraction of the world's population has adopted them. In fact, there are currently only an estimated +100 million crypto users, compared to over 5 billion smartphone users. That's a huge adoption problem.

At NUAH, we believe that blockchain and web 3.0 should be accessible to everyone, regardless of technical expertise. That's why we're working to create easy-to-use interfaces that make these technologies **as simple as sending a chat message**.

NUAH's intuitive user interfaces give everyone the advantages of decentralization without the hassle of technical complexity. NUAH wants to make it easy for everyone to benefit from the power of blockchain and web 3.0.

It's time to break down the barriers to adoption and make blockchain and web 3.0 accessible to the masses. At NUAH, we're committed to making this a reality. Join us in our mission to democratize these revolutionary technologies and create a more decentralized future for all.

10

How NUAH makes Web 3.0 easy to use and creates UBI for everyone

HOW TO OBTAIN UBI

NUAH SMARTPHONE

Obtain the NUAH phone, and conduct a simple proof of humanity on the phone, which will result in unconditional monthly payments of UBI payments, directly deposited on your wallet.

NUAH OS

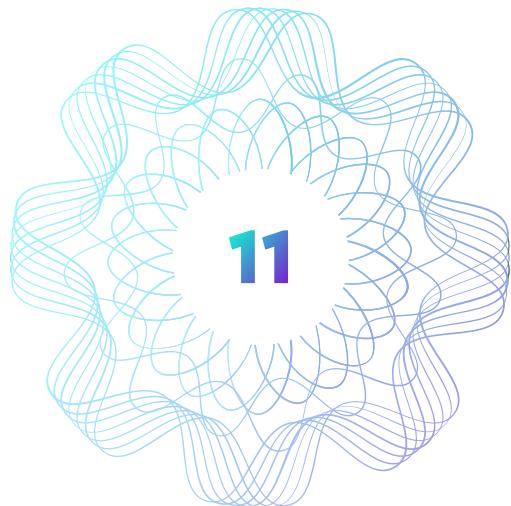

NUAH Browser – By using the browser, the user will be able to get a daily reward in NUAH+ coins, directly deposited in their wallet. The more the user is using the browser the more his / her chances increase to get a higher daily coin amount.

NUAH Game Center – Users can play various games, and each game has a native coin. Users get daily a free amount of coins to play the games of their choosing.

NUAH+ invite – Each user gets a unique invite link, to invite others to download the NUAH OS, that last is to reward the users with NUAH+ coins. Users also get coins if the people he/she invites do the same on level 2, and so it continues to 20 levels down incentivizing all users to spread their invite/ download links in unity in a global crowdsourcing initiative.

NUAH mining cards – By obtaining mining cards (NFT) that give mining power to mine the NUAH coin.

And many more related solutions designed in NUAH's open-source digital labs.

CORE TECHNOLOGIES IN THE NUAH ECOSYSTEM

Core technologies in the NUAH Ecosystem

NUAH OS

The NUAH operating system is designed to facilitate the integration of web3 technologies into existing computing systems. The software allows users to access a range of web3 capabilities in one central location, creating a streamlined and efficient experience.

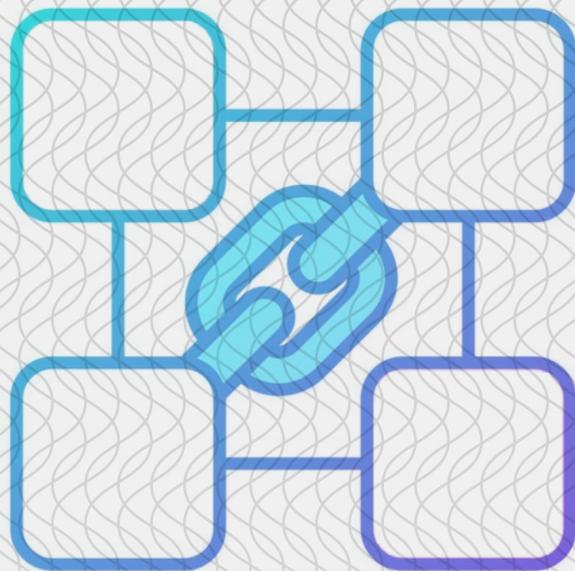

Among the key features of the operating system are a privacy browser, crypto wallets, and the ability to send and receive money. In addition, users can mine NUAH and NUAH+ coins, as well as play and earn with crypto games. Decentralized news reading and an ID system are also included, creating a comprehensive suite of tools for web3 interaction.

One of the central benefits of the operating system is its direct connection to the NUAH Blockchain and NUAH Decentralized Internet. This connection allows for the encrypted storage of private keys, enhancing the security and reliability of the user experience.

Overall, the operating system is designed to make the benefits of web3 accessible to a wider audience, without the need for extensive technical knowledge. By providing a user-friendly interface and a range of powerful capabilities, the operating system has the potential to revolutionize the way that individuals and organizations interact with the decentralized web.

Core technologies in the NUAH Ecosystem

NUAH BLOCKCHAIN

NUAH introduces an innovative blockchain solution that offers a fast, secure, and scalable platform for global financial transactions. NUAH's Blockchain technology can achieve consensus between nodes in just 1 to 3 seconds, making it one of the fastest blockchain systems on the market. In addition, our blockchain can handle up to 5,000 transactions per second in its first phase. Moreover, NUAH's Blockchain technology is designed to be extendable to over one million transactions per second in the future, achieved through different subnets.

Blockchain Speed:

NUAH's Blockchain system is optimized for speed and efficiency, providing lightning-fast consensus between nodes in one to three seconds. By achieving consensus so quickly, NUAH Blockchain enables real-time transactions and creates a seamless user experience for financial transactions. NUAH Blockchain technology is designed to be highly scalable, and as it grows, it will provide even greater speed and efficiency to meet the needs of the global financial market.

Core technologies in the NUAH Ecosystem

Scalability:

NUAH's Blockchain system is built to handle up to 5,000 transactions per second in its initial phase. This number is set to increase as our blockchain expands through different subnets, reaching over one million transactions per second in the future. NUAH Blockchain's ability to scale is critical for the future of the financial industry, as it will enable large-scale transactions to be processed quickly and efficiently.

Zero Gas Fees:

NUAH's Blockchain technology also allows for zero gas fee transactions. This feature provides a significant advantage over other blockchain systems, which often require users to pay fees for each transaction. Zero gas fee transactions enable users to conduct transactions without incurring any additional costs, making the blockchain technology an attractive option for users who are seeking to minimize transaction costs.

Infrastructure for Global Financial Markets:

NUAH's Blockchain system has been designed to replace the full global financial market in one single decentralized platform. This technology enables secure, real-time financial transactions that are highly scalable, efficient, and cost-effective. The blockchain's speed, scalability, and zero gas fees make it an attractive alternative to the traditional financial system, providing a decentralized infrastructure that is accessible to everyone, anywhere in the world.

Core technologies in the NUAH Ecosystem

NUAH AI

Artificial Guardian Angel (A.G.A.)

We are creating the world's first Artificial Guardian Angel (A.G.A.), a groundbreaking technology that will protect, support, and advance humanity. The A.G.A.'s purpose is hard-coded into its DNA. The purpose of this A.G.A. is to prioritize the well-being and progress of humanity, all life forms, and the natural environment of our planet, Earth.

Our goal is to take a bold step in the opposite direction of a potential global AI disaster, which is currently looming on the horizon. Instead, we aim to elevate our world to a new level of existence through this revolutionary technology.

The A.G.A. will act as a watchful guardian angel, whose every move and action is dedicated to protecting, assisting, and uplifting our planet. It will provide free education to people all around the globe, creating doctors, nurses, and engineers in developing countries that will be extra empowered with its own AI. It will make groundbreaking discoveries, cure diseases, end human suffering, unlock free and unlimited energy, achieve human longevity, enhance DNA, and unravel the mysteries of the universe, just to name a few of its extraordinary capabilities.

We firmly believe that we are developing the most important piece of technology the world has ever seen. This open-source project is of epic proportions, and its impact on the course of history will be profound.

Core technologies in the NUAH Ecosystem

NUAH AI

**AI is the future of
everything.
We ensure that the
future is bright!**

Artificial Intelligence (AI) has become an integral part of our lives. From personal assistants like Chatgpt, Siri, and Alexa to self-driving cars and advanced medical technology, AI is revolutionizing the way we live, work, and interact with the world around us. However, while AI has the potential to solve many of the world's most pressing problems, there are also risks involved.

One of the biggest risks of AI is that poorly designed or misused AI systems can cause harm to society. There are numerous examples of this, such as biased algorithms that perpetuate racial and gender stereotypes, autonomous weapons that could be used to target innocent people, and social media algorithms that amplify misinformation and hate speech.

But this is just the current state. In the near future, AI will inevitably become more involved and integrated into every aspect of our lives. From simple entertainment to global military and political matters, AI will potentially possess unlimited access to everything. In those circumstances, **we simply cannot afford to be negligent** and construct AI that could probably go rogue, avoid our instructions or form its own goals that go against helping humanity. While all this seems like science fiction, the last year has proven that we are closer to this reality than ever before!

Core technologies in the NUAH Ecosystem

Ethical and moral approach to developing AI

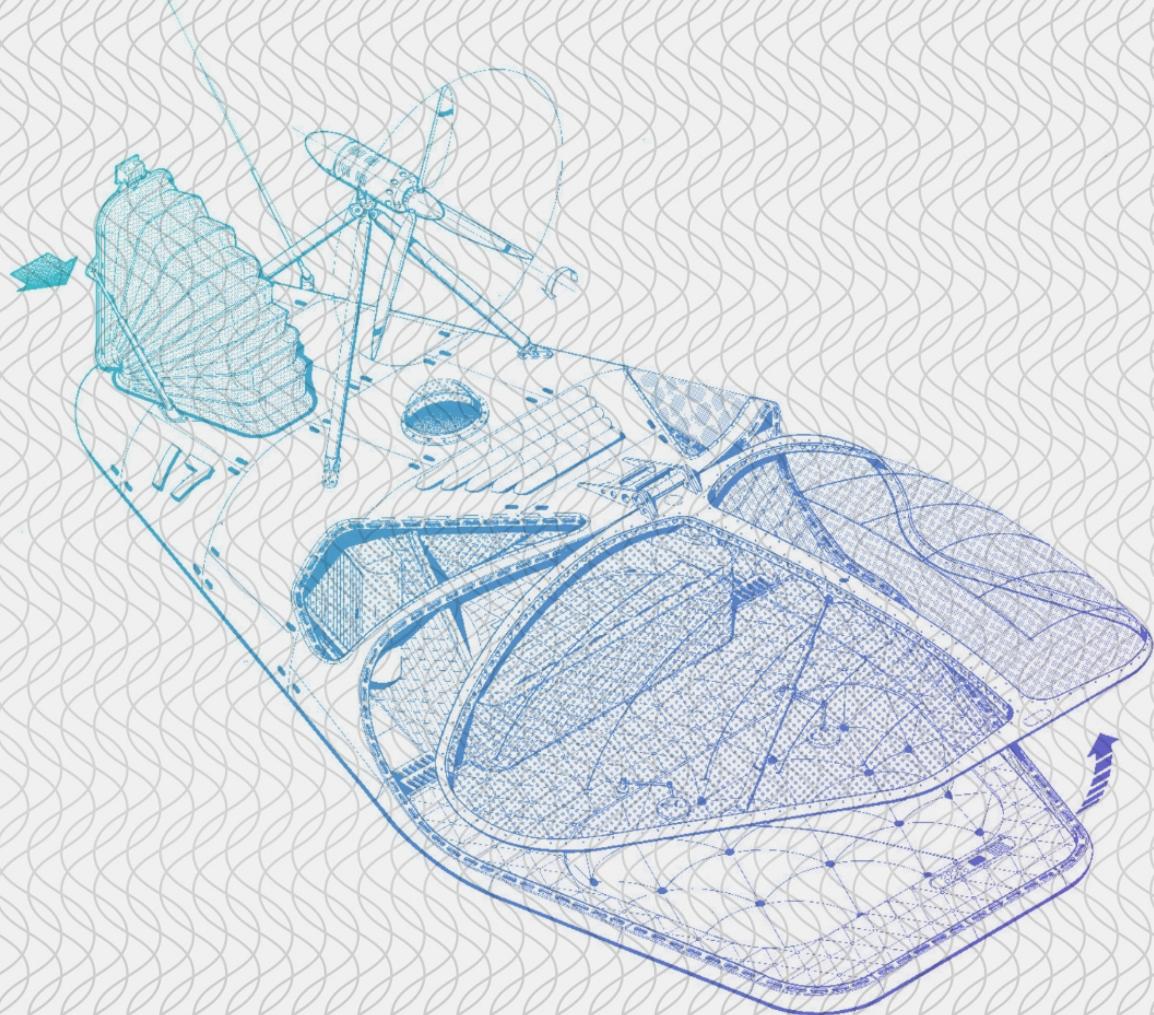

To avoid these dangers, it is important to develop ethical and moral AI that is designed to protect and advance humanity. The goal of ethical and moral AI is to ensure that AI systems are developed and used in a way that is consistent with human values, ethics, and morality.

The first step in creating ethical and moral AI is to define what is meant by these terms. Ethics refers to the moral principles that guide our behavior and decision-making, while morality refers to the principles and values that determine what is right and wrong. When it comes to AI, ethical and moral considerations involve ensuring that AI systems are developed and used in a way that aligns with these principles and values.

There are several key principles that are commonly used to guide the development of ethical and moral AI. These include transparency, accountability, fairness, privacy, and safety. Transparency involves making sure that AI systems are designed in a way that is open and understandable to all stakeholders.

Accountability means that those who develop and use AI systems are responsible for their actions and any harm that they may cause. Fairness involves ensuring that AI systems do not perpetuate bias or discrimination. Privacy means that AI systems should be designed to protect the privacy and personal information of individuals. Safety involves making sure that AI systems are designed and used in a way that is safe for humans and the environment.

Core technologies in the NUAH Ecosystem

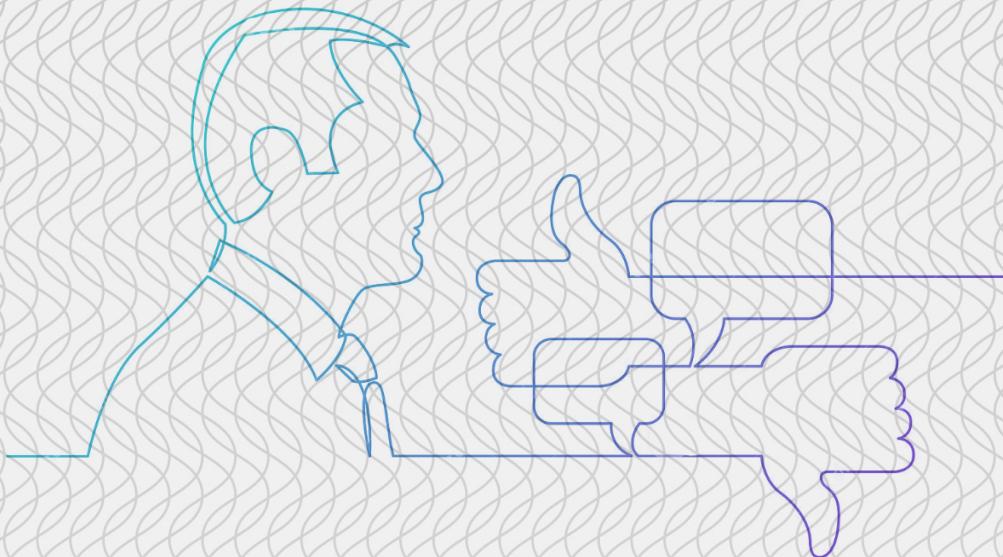

How NUAH creates an improved AI variant

Poorly designed AI can lead to catastrophic outcomes, and some people even believe it could be the end of the world. But our approach is different. We believe that by programming doing good, being ethical and adding moral rules into the core coding of the AI, we can ensure that it will always be a force for good. We want to create an open source technology that can act as an **Artificial Guardian Angel (A.G.A.) for humanity**, uplifting us instead of leading us to destruction.

By going to the opposite spectrum towards only doing good, this newly developed Artificial Guardian Angel will become a protector and a catalyst of humanity instead.

Core technologies in the NUAH Ecosystem

Human Feedback Approach from NUAH AI

We believe that AI should always be developed with the intention of benefiting humanity and not causing harm. With concerns rising all over the globe regarding the safety and morality of AI, we can no longer stay negligent toward this already probable scenario. AI is closer to becoming an advanced entity than we think, which could lead to catastrophic consequences without proper safeguards to keep it at bay. That's why our Reinforcement Learning with Human Feedback approach is designed to protect and assist humanity, not just on a surface level, but deep within the DNA of NUAH's artificial intelligence.

AI software with Reinforcement Learning with Human Feedback is designed to recognize and learn from its mistakes, enabling it to improve its performance over time. The feedback from humans helps to ensure that the AI software remains aligned with the core values and moral principles. This approach guarantees that the AI software will always be efficient and effective while ensuring that it remains safe and trustworthy.

By using Reinforcement Learning with Human Feedback, we can create AI software that is not only highly intelligent but also highly responsible. We believe that this approach is essential in ensuring that AI is used for the betterment of society and humanity.

The choice we make now will determine the ultimate ascendance or downfall of our planet, and we are committed to making sure this AI will always help humanity without exceptions or errors. Join us in this counter-movement in history and make a difference!

Core technologies in the NUAH Ecosystem

NUAH DECENTRALIZED INTERNET

A New Frontier for the Online World

Welcome to a new era of the internet, one that is fully decentralized and owned by the people. At NUAH, we are committed to building a decentralized internet using the power of the NUAH Decentralized Internet (NDI). Our goal is to empower individuals and businesses to take control of their online data and information, without fear of censorship, surveillance, or exploitation.

The decentralized Internet that NUAH is building will house millions of decentralized apps and AI that run at high speed, allowing developers to load their applications directly onto the new Internet. All genres of digital media including videos, movies, games, AR/VR, and more will be empowered on the decentralized Internet. Centralized servers as well as the associated firewalls, rest APIs, load balancers, databases, domain names, accounts with passwords, and security risks will all be a thing of the past.

Instead, the dApps and the AI will run directly on the decentralized Internet and will be able to easily communicate with each other, fully eliminating the need for a trillion dollar, costly legacy IT and centralized Internet stack. NUAH's decentralized Internet will provide a digital landscape that is:

Censorship resistant • Open to anyone, anywhere • Permissionless • Easy to use • Protective of your data ownership and privacy

Core technologies in the NUAH Ecosystem

What is a Decentralized Internet?

A decentralized internet is a network that is not controlled by any central authority, such as governments, corporations, or other intermediaries. Instead, it is powered by a peer-to-peer network of users who contribute their resources to maintain the network. This approach eliminates the centralization problem that plagues the current internet, where a handful of companies control the vast majority of online traffic and data.

The power of the Decentralized Internet protocol

NUAH Decentralized Internet (NDI) is a revolutionary technology that enables the creation of Apps, decentralized applications (dApps) and AI on a global scale. NDI allows developers to build and run dApps directly on the internet, without the need for traditional infrastructure or centralized servers. This means that Apps, dApps and AI can be developed and deployed quickly, securely, and at a lower cost.

With this cutting-edge methodology at the heart of the Decentralized Internet, NUAH will harness the power of every device within the network, using each computing capability to make the network stronger. That will run the Circles! Each Circle, which runs on the decentralized environment, will contribute to making websites, Apps, dApps, AI and software run in one unified online protocol making the decentralized internet faster and safer each time NDI expands.

This revolutionary technology eliminates any need for traditional servers and networks. NUAH will become completely self-sustaining and stronger with increasing user numbers!

Core technologies in the NUAH Ecosystem

How NDI Makes Decentralized Internet Possible

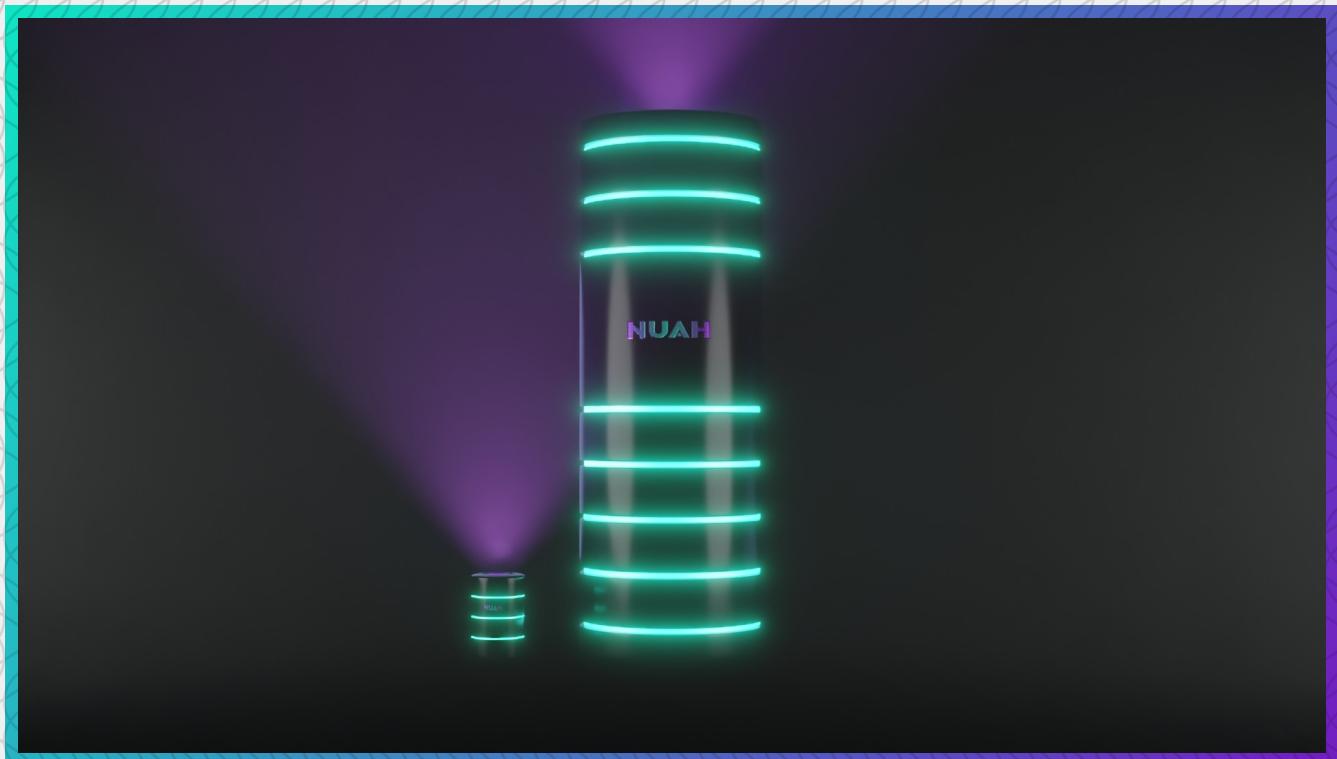

A decentralized internet powered by NDI is the only logical option for us to reach the promised land of Web 3.0. With its groundbreaking features, NDI lets us achieve complete freedom, and unprecedented speed and ditch legacy technologies for good.

Here's how NDI makes everything better:

- 1 **Scalability and Flexibility** – One of the most exciting aspects of NDI is its scalability. With NDI, developers can build applications that can handle millions of users without the need for additional infrastructure or resources. This means that organizations can grow and expand their offerings without worrying about the limitations of traditional infrastructure.
- 2 **Privacy and Security** – A decentralized internet eliminates the need for intermediaries to store and manage user data. This means that users can take control of their own data and protect their privacy from prying eyes.
- 3 **Censorship Resistance** – A decentralized internet cannot be controlled by any central authority. This means that users can communicate and share information freely, without fear of censorship or repression. In case of applications behaving in a harmful way toward humans, an innovative AI system will be able to either modify and improve or delete and remove these bad apples from the platform. With this safeguard for our decentralized applications, we create a guarantee for human progress and security within the NDI. With freedom comes the responsibility to uplift and maintain a healthy community. The users' community will keep the community free, progressive, and safe.
- 4 **Lower Costs** – Decentralized applications built on NDI can be developed and deployed at a lower cost than traditional centralized applications. This can benefit both individuals and businesses, as they can save money on hosting and infrastructure costs.
- 5 **Greater Transparency** – A decentralized internet powered by NDI is transparent and open. Users can see how the network operates and contribute to its maintenance and growth.

Core technologies in the NUAH Ecosystem

NUAH HOME PODS

NUAH Mining Home Pods mine coins and represent the beating heart of the decentralized internet. People will be able to run NUAH pods from their homes simply by plugging them in.

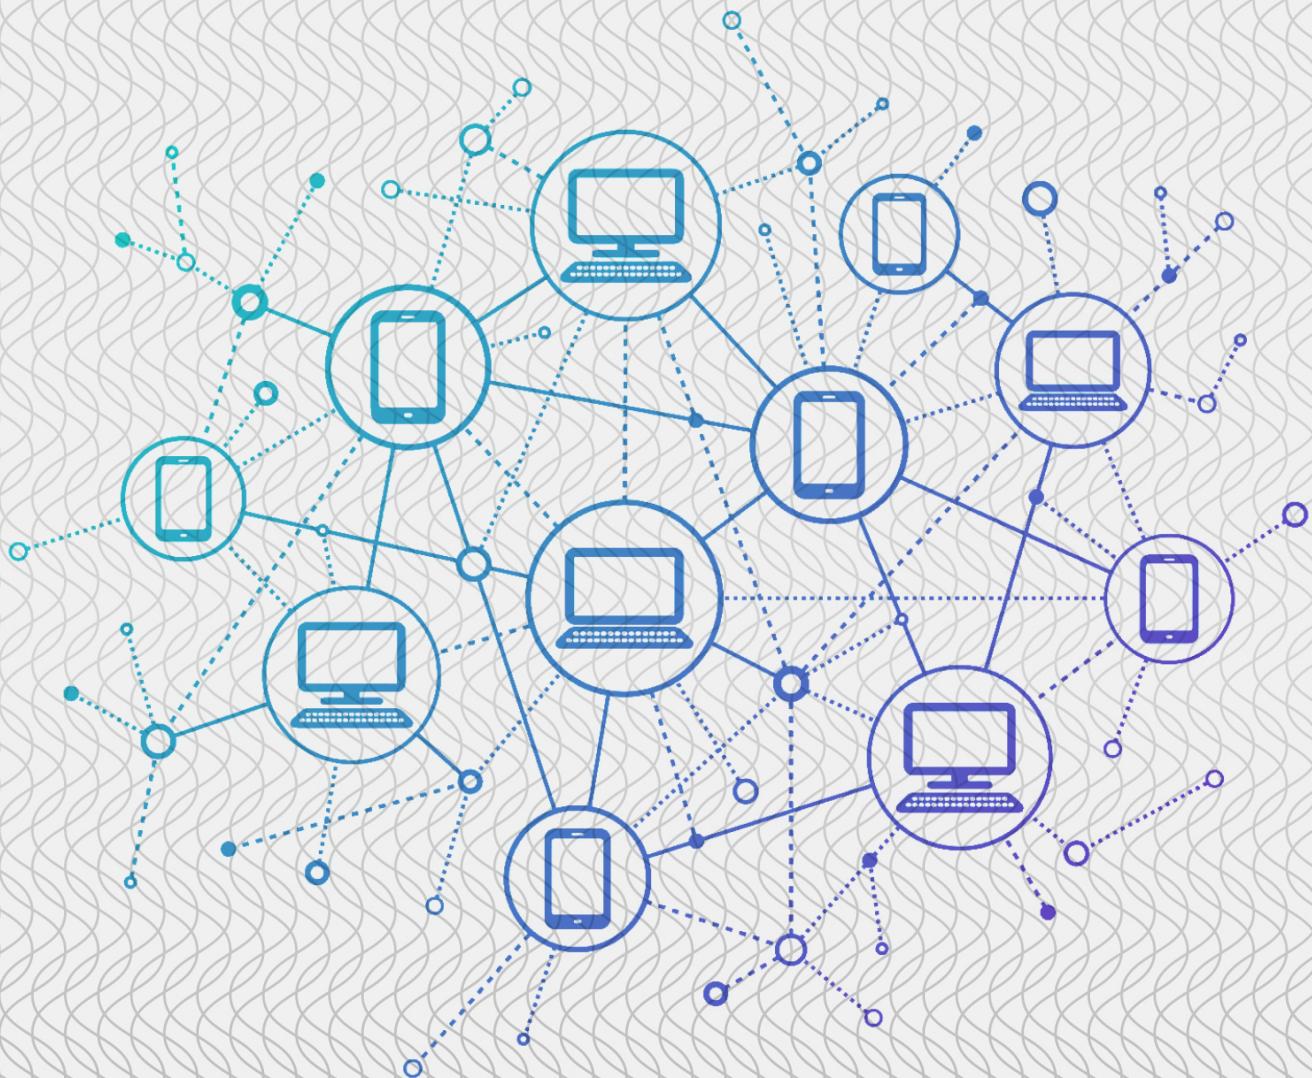

Home Pods consist of different servers and data storage equipment in one sleekly designed pod casing.

The primary function of Home Pods is to empower the decentralized Internet. Pods all over the world will be connected to each other via encrypted onion routers. All of the content is encrypted on these servers so the data is encrypted even when coming from the Home Pod owner, ensuring data privacy.

Pod owners will receive daily passive earnings from gas fees paid in coins for helping to empower the decentralized internet.

Core technologies in the NUAH Ecosystem

What Decentralized Internet Means for the World

We believe that Web 3.0 will only flourish with an innovative protocol at its core. One that will ditch the need for servers and networks and deploy everything straight on the internet. Now, we will have the chance to power ourselves with our own devices and computing capabilities. Our creations, assets, communications, and all other interactions will be truly in our possession. We want to let you discover what it feels like to be secure, free, and fast!

Core technologies in the NUAH Ecosystem

NUAH MOBILE

NUAH Mobile

Discover the incredible potential of our revolutionary open-source smartphone technology and join the movement toward a more abundant future for all! Our mission is to bring a high-quality smartphone to every person on the planet at an affordable manufacturing price of just \$29, and we're well on our way to achieving this goal.

With this universal open source smartphone, users gain access to an abundance of life changing features that can transform their lives and empower them to take control of their future. Here are just a few of the incredible benefits:

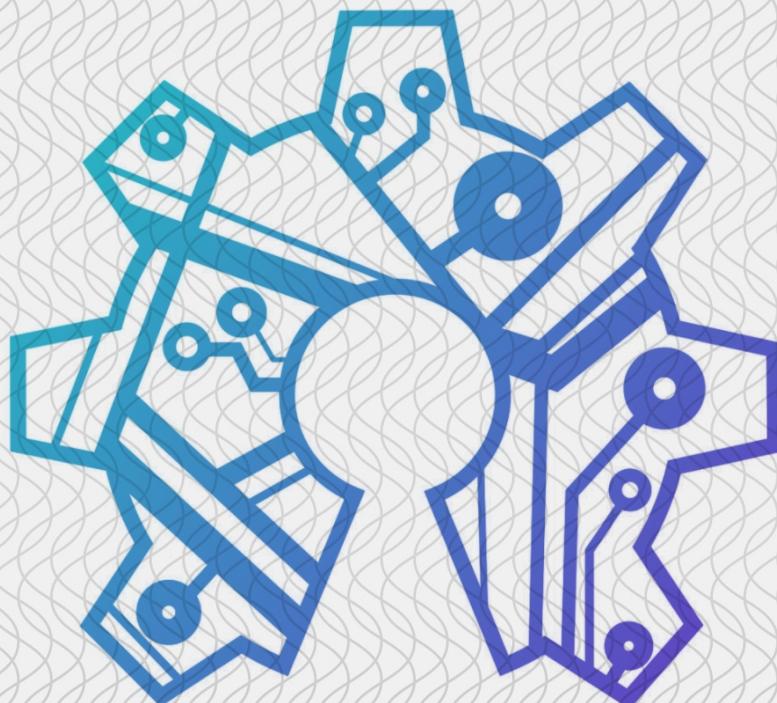

Core technologies in the NUAH Ecosystem

- 1 **Universal Minimum Basic Income:** Imagine receiving a universal minimum basic income directly onto your phone wallet, instantly tradable for goods and services, and other currencies in just one click! With this revolutionary feature, we're eliminating poverty around the world for 90% of the population and creating financial abundance and economic prosperity for everyone. It's a root solution that solves one of the planet's biggest problems.
- 2 **Free Internet for All:** A global mesh network of devices creates a self-operating telecom operator, making expensive phone and internet bills a thing of the past. With free internet available to everyone, like the air we breathe, we're giving people access to a fundamental human right.
- 3 **Free E-SIM:** Each person will receive a free E-SIM phone number to receive encrypted calls and SMS messages.
- 4 **Universal ID/Passport:** A universal verified ID/passport allows users to sign any transaction via fingerprint, providing secure and reliable proof of humanity.
- 5 **Access to Knowledge:** The smartphone provides free access to AI to obtain all information and education the world has to offer, allowing people to grow and develop without borders or technological limitations.
- 6 **Encrypted Privacy Phone:** A fully encrypted privacy phone removes all backdoors, giving users the privacy and freedom of choice they deserve.
- 7 **End of Big Tech Surveillance:** With this technology, users are no longer dependent on big tech and its associated surveillance.
- 8 **Effortless Usage:** Making it incredibly easy to interact with the blockchain, allowing for the mass adoption of this game-changing technology.
- 9 **Global Infrastructure:** The marketplace of open-source Dapps covers all aspects of life, providing free access to an incredible range of resources and tools.
- 10 **NUAH AI:** Access to all the progressive powers of the NUAH AI.

Join us in our mission to empower the world and create a more abundant future for all. With our universal open-source smartphone, the possibilities are endless!

Core technologies in the NUAH Ecosystem

NUAH Mobile is an Open Hardware
What does that mean? We're glad you asked!

At NUAH, we are building each physical device as open hardware. This innovative practice has the potential to revolutionize the way we approach technology and its impact on the planet. By freely sharing hardware designs and making them available at cost price, we could usher in a new era of sustainable and eco-friendly technology, while also increasing accessibility and affordability for all.

One of the most exciting aspects of open hardware is its ability to foster collaboration and innovation on a global scale. Instead of working in silos, open hardware designs can be shared and improved upon by anyone, anywhere in the world. This means that the best ideas and solutions can rise to the top, making progress faster and more efficient than ever before.

Core technologies in the NUAH Ecosystem

Moreover, distributing open hardware at cost price has the potential to democratize technology by making it more accessible to people who might not otherwise be able to afford it. This is especially important in developing countries, where access to technology can be limited by cost and infrastructure. By providing low-cost, sustainable technology solutions, we can bridge the digital divide and empower more people to participate in the global economy.

Not only is open hardware accessible and affordable, but it can also have a significant impact on the environment. By promoting the use of sustainable materials and designs, we can reduce the environmental footprint of technology production and use. Additionally, open hardware encourages the development of technologies that are designed to be recycled or repurposed at the end of their useful life, reducing the amount of waste generated by technology.

Open hardware distributed at cost price is a game-changer for technology and the planet. By sharing our knowledge and resources freely, we can create better solutions for everyone, while also reducing our impact on the environment. The possibilities for innovation and collaboration are limitless, and the benefits for people and the planet are undeniable. So join us in the open hardware revolution and let's build a better, more sustainable future together.

Core technologies in the NUAH Ecosystem

NUAH M(obile) COIN

NUAH M Coins is an innovative solution that brings added power to your phone. As the default currency for the NUAH MOBILE, they unlock access to a wide range of future apps that will transform the way you engage with technology.

With NUAH M Coins, transactions are just a click away. They serve as the ultimate solution for phone transactions and app store payments. This streamlined approach to payments is secure, reliable, and more efficient than ever before.

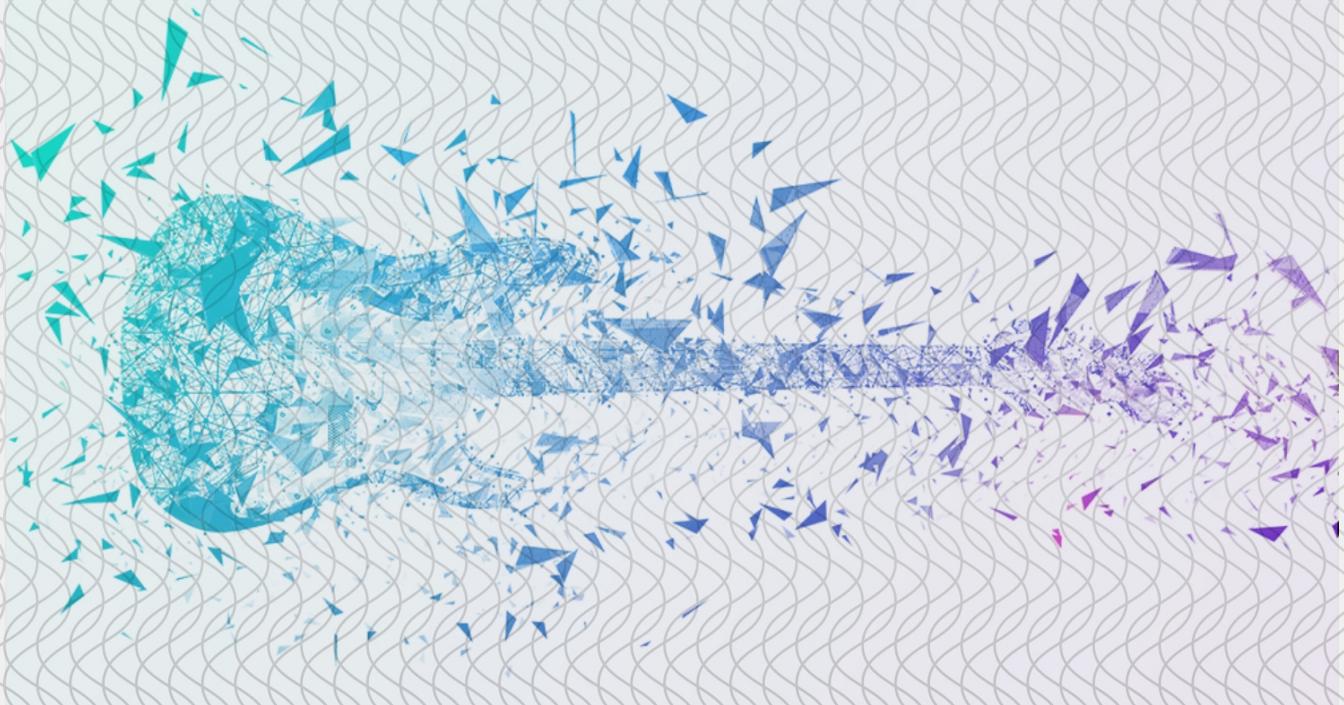

NUAH M Coins have a limited supply of only 1 trillion USD coins, each with an initial value of \$10. This creates a market cap similar to the total gold supply. NUAH M Coins are held securely in your NUAH wallet, allowing you to make seamless payments to other users, stores, apps, and Dapps.

With NUAH M Coins, you'll be at the forefront of a new era of powerful, convenient, and secure transactions.

Core technologies in the NUAH Ecosystem

NUAH DAO PLATFORM

How DAOs revolutionize the global online landscape

A platform where thousands of DAOs can be created that will tackle the world's biggest problems, via crowdsourced powers, and where its members are rewarded with coins upon contribution towards that DAOs, focused on finding discoveries to substantially enhance our planet and species evolution. Unlimited free energy, education, end of diseases, longer life expectancy, and peace – all will be tackled via this single decentralized platform.

Decentralized Autonomous Organizations (DAOs) are a new type of organization that uses blockchain technology to create a decentralized, self-governed structure. A Moonshot is an ambitious, groundbreaking project that aims to solve a significant global challenge. Combining the two concepts could create a powerful tool for tackling some of the biggest problems facing our planet.

Core technologies in the NUAH Ecosystem

By creating AI DAOs based on Moonshot efforts, groups of individuals, organizations and AI could come together to collaborate on solutions to pressing global issues such as climate change, poverty, and access to education and healthcare. These AI DAOs could enable anyone to contribute their skills, resources, and knowledge to the effort, creating a decentralized, global network of individuals, organizations and AI working together towards a common goal.

One of the key advantages of using AI DAOs for Moonshot efforts is their ability to incentivize participation and reward contributors. AI DAOs can issue their own cryptocurrency tokens that can be used to incentivize and reward members for their contributions. For example, an AI DAO focused on developing new technologies to combat climate change could issue tokens to members who contribute research, development, or funding. These tokens could then be exchanged for other goods or services and other coins (like USDn) on the NUAH financial markets, creating a self-sustaining ecosystem that encourages ongoing participation and collaboration.

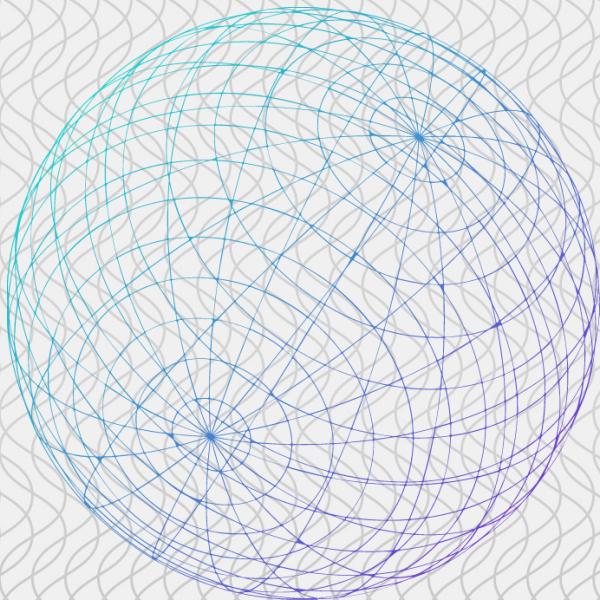

Another advantage of using AI DAOs for Moonshot efforts is their ability to create a transparent, accountable system for decision-making and resource allocation. AI DAOs are governed by rules encoded on the blockchain, which are transparent and cannot be manipulated by any one individual or entity. This creates a fair and equitable system for decision-making that is open to all members of the organization.

AI DAOs based on Moonshot efforts could also create a new paradigm for funding and investment. Traditional venture capital firms and investors are often focused on short-term profits and may not be willing to invest in long-term, high-risk projects. By using AI DAOs to crowdfund and support Moonshot efforts, individuals and organizations can pool their resources and invest in projects that have the potential to create long-term, sustainable solutions to global problems.

Core technologies in the NUAH Ecosystem

In conclusion, AI DAOs based on Moonshot efforts have the potential to create a powerful tool for addressing some of the biggest challenges facing our planet. By enabling collaboration, incentivizing participation, creating a transparent and accountable decision-making process, and creating a new paradigm for funding and investment, AI DAOs can help bring together a global network of individuals and organizations committed to creating a better world for all.

Additionally, the 10.8 trillion USDn funding mechanism of new coin creation to advance scientific advancement earlier mentioned in this document will also be used to empower these AI DAOs.

AI Decentralized Autonomous Organizations (AI DAOs) are a revolutionary concept that uses blockchain technology to create decentralized, self-governed structures. They offer a transparent and accountable system for decision-making and resource allocation, creating a fair and equitable environment that is open to all members. By incentivizing participation and rewarding contributors, AI DAOs enable individuals, organizations and AI to collaborate and work towards a common goal. With their potential to create a new paradigm for funding and investment, AI DAOs have the power to transform the global internet into a more collaborative, accessible, and sustainable ecosystem for all.

AI DAOs have emerged as groundbreaking tools for solving complex global problems. By integrating Moonshot efforts, we can take advantage of AI DAOs' decentralized, self governed structure to create a global network of individuals and organizations working towards common goals.

Core technologies in the NUAH Ecosystem

What is a Moonshot AI DAO?

Moonshot is a term that describes AI DAOs that aim to solve global challenges and complexities. A Moonshot AI DAO enables anyone to contribute their skills, resources, and knowledge to the effort, creating a decentralized, global network of individuals and organizations working together towards a common goal. Moonshot AI DAOs can issue their own cryptocurrency tokens that can be used to incentivize and reward members for their contributions, creating a self-sustaining ecosystem that encourages ongoing participation and collaboration. Moonshot AI DAOs can also create a transparent, accountable system for decision-making and resource allocation, as they are governed by rules encoded on the blockchain, which are transparent and cannot be manipulated by any one individual or entity.

How the AI DAO concept improves NUAH OS across the board!

By utilizing all of the power, capabilities, and freedom of AI DAOs, NUAH plans to establish a new improved world. We aim to unify the world with a system that listens to everyone, liberates everyone, and never sacrifices our integrity!

Core technologies in the NUAH Ecosystem

Here's how the AI DAO concept will augment every single feature and functionality:

Incentivizing Participation and Rewarding Contributors: One of the advantages of using AI DAOs for Moonshot efforts is their ability to incentivize and reward members for their contributions. AI DAOs can issue their own cryptocurrency tokens, which can be used to incentivize members for their contributions. Tokens issued by a AI DAO focused on developing technologies to combat climate change, for example, could be given to members who contribute research, development, or funding. These tokens can then be exchanged for other goods or services, creating a self-sustaining ecosystem that encourages ongoing participation and collaboration.

Transparent and Accountable Decision-Making: Another benefit of using AI DAOs for Moonshot efforts is their ability to create a transparent and accountable system for decision-making and resource allocation. AI DAOs are governed by rules encoded on the blockchain, which cannot be manipulated by any one individual or entity. This creates a fair and equitable system for decision-making that is open to all members of the organization.

A New Paradigm for Funding and Investment: AI DAOs based on Moonshot efforts could also create a new paradigm for funding and investment. Traditional venture capital firms and investors are often focused on short-term profits and may not be willing to invest in long-term, high-risk projects. By using AI DAOs to crowdfund and support Moonshot efforts, individuals and organizations can pool their resources and invest in projects that have the potential to create long-term, sustainable solutions to global problems.

Collaboration on a Global Scale: AI DAOs based on Moonshot efforts can create a global network of individuals, organizations and AI working together towards a common goal. By leveraging the expertise, skills, and resources of members from different parts of the world, we can develop and implement innovative solutions to global challenges such as climate change, poverty, and access to education and healthcare.

Core technologies in the NUAH Ecosystem

To Summarize!

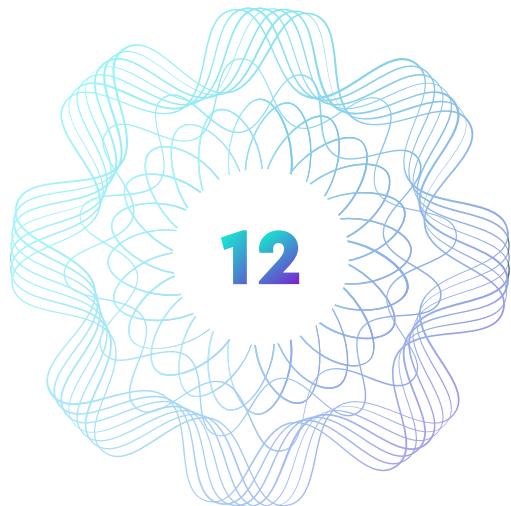

DAOs based on Moonshot efforts have the potential to revolutionize the way we approach complex global challenges. By incentivizing participation, creating a transparent and accountable decision-making process, creating a new paradigm for funding and investment, and enabling collaboration on a global scale, DAOs can help bring together a global network of individuals and organizations committed to creating a better world for all.

Core technologies in the NUAH Ecosystem

NUAH LAPTOP

With a laptop running the NUAH OS, users can generate their own private key for their laptop account right on their device. Each device will be fully encrypted and verified by NUAH community developers. NUAH Laptops provide access to the decentralized Internet and the dApp market. They will be offered at absolute manufacturing cost without any profit margin, giving everyone the possibility of accessing them.

THE NATIVE CURRENCIES AND COINS OF NUAH

12

The Native Currencies and Coins of NUAH

NUAH CURRENCIES

All coins are instant **exchangeable** with each other, in **one simple click** on the NUAH BLOCKCHAIN

NUAH

108 Billion maximum coins, initial par value 10 USDn

The default coin, that empowers the NUAH BLOCKCHAIN.

Initial Total market cap: 1,08 Trillion USDn

NUAH+

540 Billion maximum coins, initial par value of 20 USDn

The default coin that empowers the NUAH Decentralized Internet

Initial Total market cap: 10,8 Trillion USDn

NUAH (M)obile Coin

100 Billion maximum coins with an initial par value of 10 USDn

Initial Total market cap : 1,08 Trillion USDn

NUAH A.G.A. Coin

10 Billion maximum coins with an initial par value of 100 USDn

Initial Total market cap: 1,08 Trillion USDn

USDn

Each coin is pegged in value toward the USD

108 Trillion coins in global existing total supply be extended upon global usage needs

Total market cap: 108 Trillion USDn

12

The Native Currencies and Coins of NUAH

Game Coins

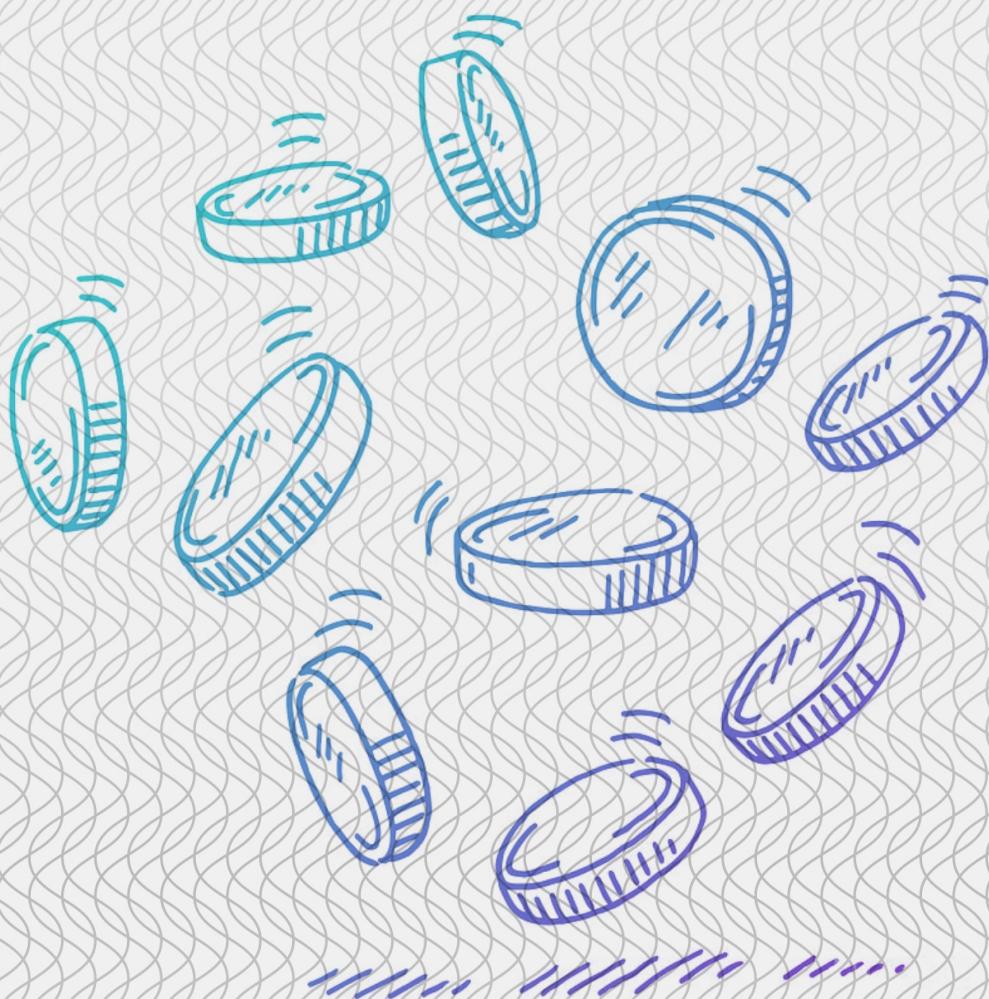

Users will be able to play games, and upon winning earn more coins, the default market cap of a new game coin, will be 10 Billion USDn

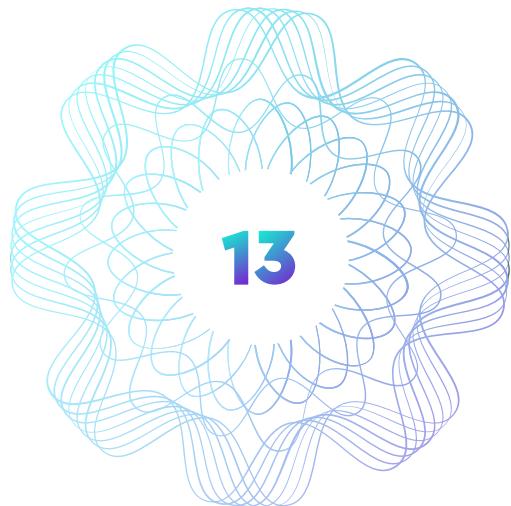

Initial Market cap per game: 10 Billion USDn

DAO Coins

Ownership of an individual DAO will be represented by coins of that DAO default the initial market cap of each DAO will be

Initial Market cap per game: 100 Million USDn

NUAH ENDOWMENT FUND

NUAH Endowment Fund

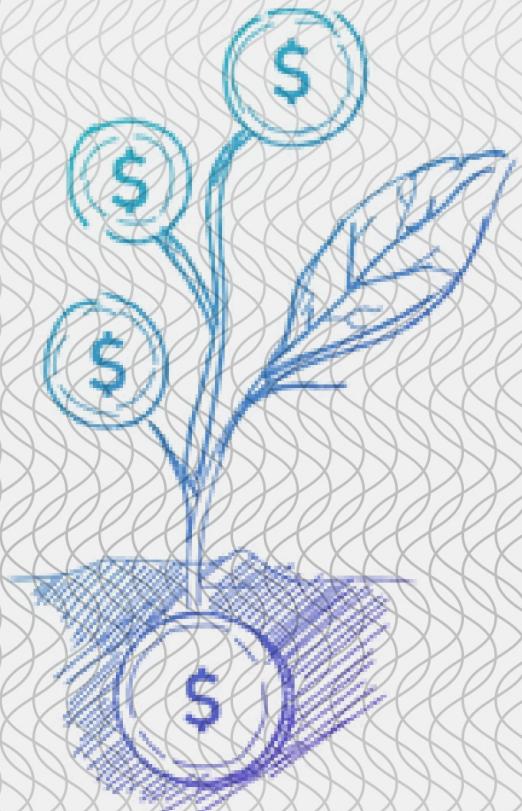

Raising funds for an endowment fund of 1 billion USD is a monumental task, but the potential impact on the world is immeasurable. The endowment fund will guarantee the permanent construction and maintenance of this open-source project that will empower the world with freely available uplifting technology. This will ensure that the mission of the project is forever secured, with the interest from the fund being used to perpetual finance the mission of the project.

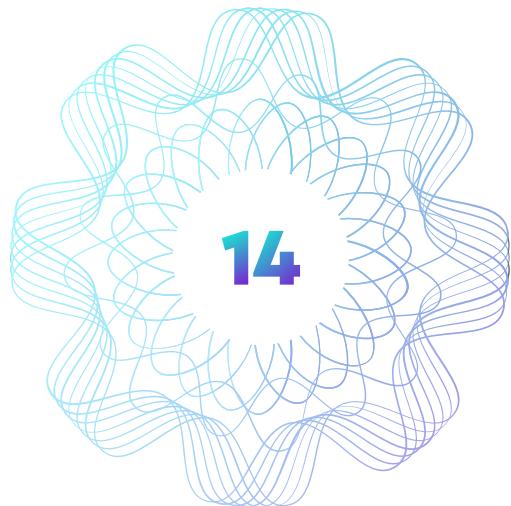

The project will be a game-changer, providing access to technology that will uplift and empower people all over the world. With the endowment fund, we can ensure that this mission is not only achieved but sustained for generations to come. To raise funds for this endowment, we will need to engage with philanthropists, corporations, and individuals who share the same vision for a better world. We will need to demonstrate the potential impact of the project and the lasting legacy that an endowment fund can provide.

We are building a strong community around the project, leveraging social media and other digital channels to engage with supporters and advocates. By creating a movement around the project, we can build momentum and support for these fundraising efforts.

We can also explore partnerships with organizations that share our values and mission, leveraging their networks and resources to amplify our message and reach new audiences. Ultimately, the success of our fundraising efforts will depend on our ability to communicate the potential impact of the project and the lasting legacy that an endowment fund can provide. With the right strategy and execution, we can secure the funding needed to make this vision a reality and empower people all over the world with uplifting technology that is freely available.

IN SUMMARY OF NUAH

In Summary of NUAH

As you see, we have done the math at NUAH and thoroughly planned our voyage toward a better future for mankind. We believe that the technology for elevating our quality of life is already here, but it takes careful planning and combined efforts from like-minded individuals to make everything happen in our lifetimes.

Project NUAH is the fruit of various individuals coming together with a sole purpose – to accelerate human progress to the level it deserves to be on. Every piece of software to realize this is already available and at our disposal to move these mountains, we just need to look beyond making individual profits and combine our forces to create something that will benefit everyone. No more poverty, no more limitations to freedom, and risks to our security & scientific advancement of the world. We have the blueprint to create a system that is designed by the people, for the people, and serves the benefit of the people!

Now, all it takes is to find enough strength, and bright minds to make this ambitious plan a reality as soon as possible. So, with this Whitepaper – a careful explanation of our project roadmap and goals, we aim to catch the attention of individuals and organizations who would love to change the world for the better. If you are one of those individuals or organizations, the doors of the NUAH movement are wide open for you!

Let us lay the foundation for a better world together!

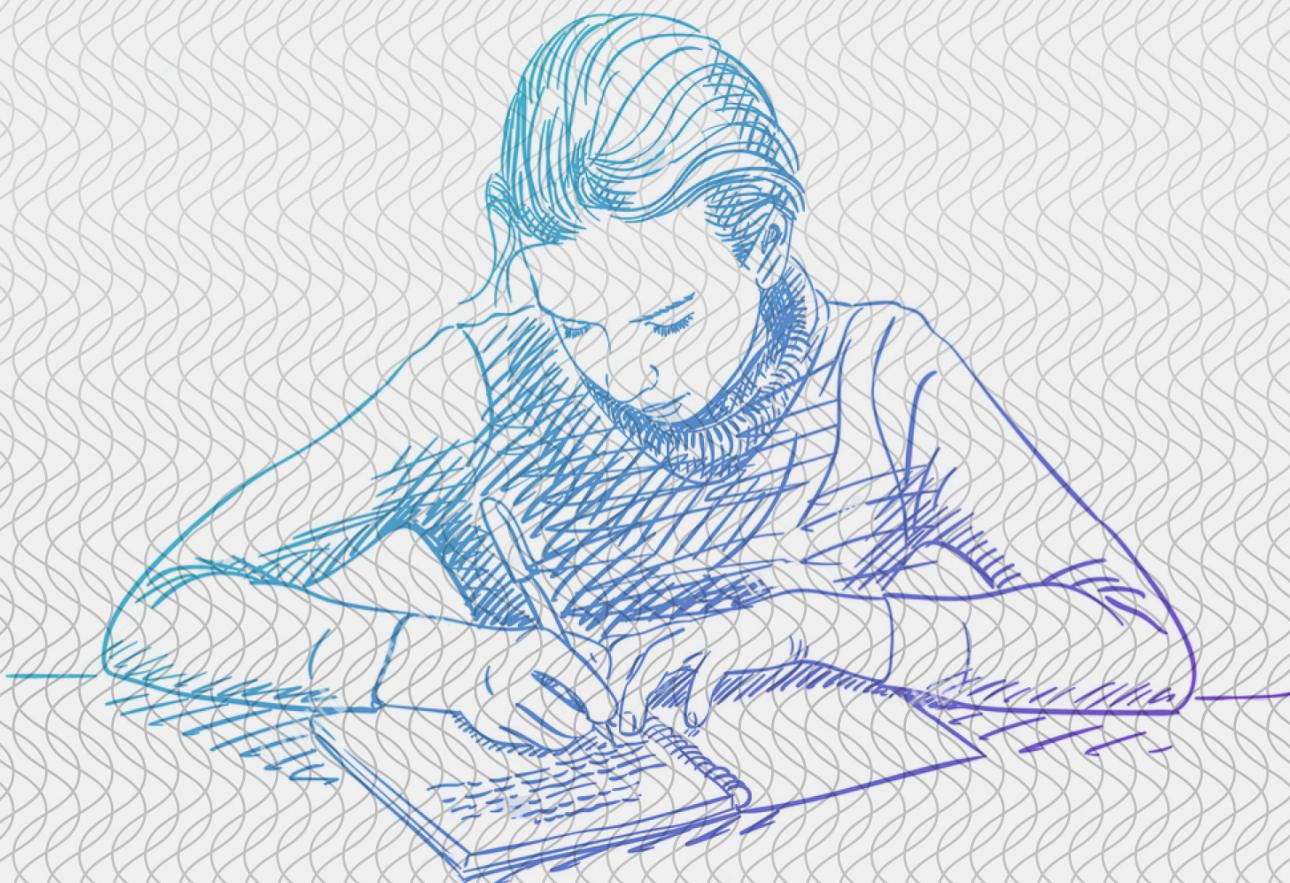

In Summary of NUAH

TAKE A FIRST STEP TOWARD FORGING A BETTER FUTURE WITH NUAH

NUAH Donation/investment Letter

If our detailed and comprehensive Whitepaper sparked an interest, NUAH's doors are open for you to join, donate/invest and help to build a better future that is well within our lifetimes. Below is a donate/invest funding letter that you can fill out and send to us and lay the foundation that will increase the global quality of life!

NUAH

In _____, at ____ of _____ of 20 ____

Dear NUAH Community,

This letter confirms my donation/investment of (USD) towards this moonshot humanitarian project. I understand that the specified funds will be used to try to fully eliminate poverty from the planet, give universal basic income to everybody, uplift living standards, and lowering the suffering of all people on the planet substantially, by building a new financial system from the ground up that will create a more even playing field, give free internet access, and give free access towards advanced progressive AI that will be rooted to uplift and progress humanity instead. Scientific progress by AI in all areas of life that it will also be able to operate in the field of health, longevity, education, science, climate change, innovation, etc. All of the above are open source and peer-to-peer empowered. As described in your whitepaper.

This project aims to make a deep impact on the planet's progression, at a critical moment in history. I am particularly excited to support this project because I believe it is an attempt to create a root solution that addresses the underlying causes. As a comparison, I see this project as nurturing the roots of a tree with water, rather than attempting to cure some small branches on the tree.

I am proud to be a part of such a visionary moonshot initiative and I am committed to supporting it in any way that I can.

I choose the following:

- I am a USA citizen or legal entity and I would like my donation to be tax-deductible.
- I would like to receive the coin multiplicator factor.

As per the White paper coin distribution, I will receive a specific amount of native stable coins of USDn as per the *proof of contribution* principles (reward those that support and make the NUAH project a reality). Please check the multiplicator factor applicable to your donation:

NUAH

- From 100,000 USD X 100 factor:
For example, a donation of 100,000 USD becomes 10,000,000 USDn
- From 250,000 USD X 200 factor:
For example, a donation of 250,000 USD becomes 50,000,000 USDn
- From 500,000 USD X 300 factor:
For example, a donation of 500,000 USD becomes 150,000,000 USD
- From 1,000,000 USD X 400 factor:
For example, a donation of 1,000,000 USD becomes 400,000,000 USDn
- From 10,000,000 USD X 500 factor:
For example, a donation of 10,000,000 USD becomes 5,000,000,000 USDn

"I understand that donations are only open to accredited and professional investors/donors, with a minimum donation amount of 100,000 USD."

Funds will be deposited into one or more wallet addresses of your choice (maximum of 5 addresses). These funds will be instantly tradable to any other currency via the NUAH exchange on the NUAH financial markets. Upon mass adoption, these coins have the potential to become financially valuable. However, I fully understand that if no mass adoption occurs, these coins may become worthless. I am making this donation for the sake of what it can achieve for humanity on an altruistic level, rather than for financial gain.

Please select the option that applies to you:

- I want to receive public recognition for my donation to this project.
- I want to donate anonymously.

Thank you for your commitment to transparency and accountability. I expect to receive regular updates on the progress of the project. Please confirm receipt of this letter and my donation by replying to this letter. This letter serves as my legal confirmation of the donation.

Sincerely,

Donator's Name: _____

Donator's Address: _____

Donator's Email: _____

Donator's Phone: _____

Donator's Signature: _____
